PARTS LIST
1 Secondary Fuel Module
1 CAN link cable
1 Installation guide
2 Velcro strips
1 Alcohol swab

2017-2018 Suzuki GSXR1000
Installation Instructions

PLEASE READ ALL DIRECTIONS BEFORE STARTING INSTALLATION
1. Remove the main seat and the passenger seat and the bodywork at the top of the tail section.

2. Remove the bodywork around the fuel tank and the fuel tank itself.

3. Install the SFM in the tail section near the PCV (Fig. A).
   
   Use the supplied Velcro to secure the module. Clean surfaces with the supplied alcohol swab before attaching the Velcro.

4. Plug the CAN link cable into one of the expansion ports of the SFM and the other end into one of the expansion ports of the PCV.
   
   It doesn’t matter which ports you use.

5. Connect the unterminated WHITE and BLACK/WHITE wires of the SFM wiring harness to the PCV module, as described on page 3.

6. Route the SFM wiring harness along the PCV and stock wiring harness as shown in Figure B.

7. Secure the SFM ground wire with the small ring terminal to the bolt at the top of the crankcase shown in Figure B.

8. Unplug the stock wiring harness from the UPPER secondary fuel injectors (Fig. C).
9 Plug the SFM wiring harness in-line of each UPPER secondary fuel injector and each stock connector (Fig. D).

**ORANGE** - Cylinder #1 (left most)

**YELLOW** - Cylinder #2

**GREEN** - Cylinder #3

**BLUE** - Cylinder #4 (right most)

10 Reinstall the fuel tank, bodywork, and seats.

---

**Connecting the SFM to the PCV**

1 Insert the WHITE wire from the SFM into the #1 input position on the PCV.

2 Insert the BLACK/WHITE wire from the SFM into the #4 or #6 input position of the PCV.

*If you are also installing the Ignition Module, connect these wires as described in the Ignition Module install guide.*

---

**IMPORTANT NOTICE***

The SFM and your PCV may need to be updated. The PCV and SFM need to both have the same firmware loaded and the most up to date version available (at least 0.1.14.2 or higher) installed. To install this firmware you also need to be using the latest PC5 software version (1.0.6.4 or higher). The latest software and firmware can be found at: [http://www.powercommander.com/powercommander/Downloads/powercommander_downloads.aspx?ProdType=PCV](http://www.powercommander.com/powercommander/Downloads/powercommander_downloads.aspx?ProdType=PCV)

To update your firmware go to Power Commander Tools - Update Firmware. Click on the unit you wish to update (PCV Primary Module or Secondary Fuel Module) and then click on Update. This will bring up a window so that you can search the computer to find and open the firmware file. Open the file from the location on the computer where it has been saved.

The SFM needs to be added to the PCV network. To do so connect a USB cable to the PCV and another USB cable to the SFM. Open the PCV control center software and it will add the SFM to the network. You are now able to use the SFM.

The SFM is shipped in BASIC mode. This means that you will have 1 Fuel table in the software. This fuel table controls the lower set of injectors and upper set of injectors simultaneously. Whatever value is entered in a cell will automatically be put into the corresponding cell for the upper injectors.

If you put the SFM in ADVANCED mode you will have 2 Fuel tables. This allows a separate fuel table for the upper injectors, if desired.
